

The smarter wi-fi thermostat with remote sensor

Ordinary thermostats read the temperature in only one room, but are supposed to deliver comfort in all rooms. ecobee remote sensors deliver the right temperature in the rooms that matter most.

Average 23% savings

Homeowners are spending hundreds of dollars a year on heating and cooling their homes, often when they're not even there to enjoy it. ecobee delivers comfort when they're home and savings when they're not, resulting in an average 23% savings* year after year.

Anytime, anywhere

Monitor and control your wi-fi connected ecobee3 anytime, from anywhere, on your smartphone, tablet, or computer.

Free remote sensor

ecobee3 comes with one free remote sensor and can support up to 32. The sensors measure temperature and occupancy allowing the thermostat to balance the temperature in your home so that it is comfortable in the rooms they are actually in and not just the hallway.

Reliable technology

ecobee is hard-wired for reliability and has been since 2009 when we created the world's first wi-fi smart thermostat. Unlike some competitors, we don't use power stealing because it is unreliable.

Live weather

Start your day with live weather and a preview of the days ahead with a 5-day forecast.

Easy installation

Our streamlined process and auto-detection features make installation easier than ever. Average install times will be less than 45 minutes.
